                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a human non-inactivating amiloride-sensitive proton-gated cation channel designated hASIC3. hASIC3, its encoding nucleic acid and the recombinant host cell are useful in a composition or a kit for screening compounds useful as proton-gated cation channel ligands. The ligands are useful as analgesics.

The protein is a proton gated cation channel subunit that has biphasic desensitisation kinetics with both a rapidly inactivating sodium-selective and a sustained component. The channels are sensitive to amiloride. The specification describes ASIC3 proteins, which are expressed in the sensory neurons but not in the brain. The cation transport channel proteins can be used in methods to identify substances capable of modulating the activity of cation transport channels. The human ASIC3 protein is also an acid sensor, and might play an important role in the detection of lasting pH changes.

It is encoded by a polynucleotide (see AAW84191) that was obtained from dorsal root ganglia cDNA by PCR amplification using primers (see W842120-21) based on the hSLANC1 polynucleotide (see AAV84189), hSLNAC1 is a member of a new class of sodium channel proteins that may be responsible for some nervous system transmissions, or may be used as a target to regulate some transmissions linked to various pathologies. The splice variant cDNA has a 79-nucleotide insert in the 3' portion of the coding region. This alters the reading frame. As dorsal root ganglia are involved in pain perception, the splice variant protein is expected to have a function linked to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A new sodium channel receptor - useful f neuronal degenerate problems, Alzheimer' morphine dependence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-DEC-1998.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Вþ
       This is the amino acid sequence of a new human sodium channel creeptor, termed hSLNAC1, as deduced from an isolated cDNA clone (see AAV84189). hSLNAC1 is a member of a new class of sodium channel proteins that may be responsible for some nervous system transmissions linked to various pathologies. Methods for producing hSLNAC1 polypeptides by recombinant methods are disclosed. Host cells expressing hSLNAC1 can be used to screen for agonists or antagonists of hSLNAC1. Such compounds can be used to treat neurodegeneration, hyperalgesia, Alzheimer's disease, Parkinson's disease, Chorea, muscular spasm, epilepsy, stroke, cardiac disease, schizophrenia, depression, nicotine dependence, morphine dependence, amyotrophic lateral sclerosis, multiple sclerosis, inflammation, pain, cancer and obesity, to mimic or antagonise the effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        chorea; muscular spasm; epilepsy; stroke; cardiac disease; schizophrenia; depression; nicotine dependence; amyotrophic lateral sclerosis; multiple sclerosis; inflammation; pain; cancer; obesity; neurogransmitter; analgesic; anaesthesia.
                                                                                                                                                                                                                                                   neuronal degenerate problems, morphine dependence
                                                                                                                                                                                                                                                                                                            WPI; 1999-070215/06.

It is encoded by a cDNA clone (see AAV84190) derived from the human cerebellum. hSLNAC1 is a member of a new class of sodium channel proteins that may be responsible for some nervous system transmissions, or may be used as a target to regulate some transmissions linked to various pathologies. Agonists and antagonists of hSLNAC1 activity can be used to treat e.g. neurodegenerative problems, morphine or nicotine dependency,

Protein comprising proton-sensitive neuronal channel - useful screening for analyesics and for treating neurodegeneration for

Claim 6, Page 38-40; 64pp; French.

(pain) rather than taste. These compounds are used to treat or prevent pain associated with acidity (e.g. in cases of inflammation, ischaemia or some tumours) and as inhibitors of neurodegeneration caused by overexpression of the channels. Antibodies to the protein are used to detect the channels in tissues, and to act therapeutically as channel modulators. The nucleic acid can be used to generate transgenic, particularly knockout, animals for studying ASIC-related disorders, also for gene therapy. The channel protein, or its (ant)agonists, can be used to treat or prevent cerebral neurodegenerative conditions (e.g. Alzheimer's, Parkinson's or Huntington's diseases, amyotrophic lateral DRASIC protein, a member of the neuronal cationic channel family that are sensitive to amiloride and activated by protons. The DRASIC gene is expressed in sensory neuronal cell rather than in the brain as with other members of the ASIC gene family. The protein can be used to screen for modulators of these channels, particularly to identify compounds that modulate perception of acidity, as regards nociception sclerosis sequence represents the rat Acid Sensing Ionic Channel (ASIC) or cerebellar ataxia.

Disclosure; Page 77-79; 84pp; English.

The present sequence represents a rat neuronal acid-sensitive cation channel 3 (ASIC3) protein. The protein is a proton-gated cation channel subunit that has biphasic desensitisation kinetics with both a rapidly inactivating sodium-selective and a sustained component. The channels are sensitive to amiloride. The specification describes ASIC3 proteins, which are expressed in the sensory neurons but not in the brain. The cation transport channel proteins can be used in methods to identify substances capable of modulating the activity of cation transport channels. The human ASIC3 protein is also an acid sensor, and might play an important role in the detection of lasting pH changes pH changes

pain associated with acidity (e.g. in cases of inflammation, ischaemia or some tumours) and as inhibitors of neurodegeneration caused by overexpression of the channels. Antibodies to the protein are used to detect the channels in tissues, and to act therapeutically as channel modulators. The nucleic acid can be used to generate transgenic, particularly knockout, animals for studying ASIC-related disorders, also for gene therapy. The channel protein, or its (ant)agonists, can be used to treat or prevent cerebral neurodegenerative conditions (e.g. Alzhelmer's, Parkinson's or Huntington's diseases, amyotrophic lateral sclerosis or cerebellar ataxia.
                                                                                                                                                                                                                                                                                     This sequence represents the human Acid Sensing Ionic Channel (ASIC) protein MDEG, a member of the neuronal cationic channel family that are sensitive to amiloride and activated by protons. The protein can be used to screen for modulators of these channels, particularly to identify compounds that modulate perception of acidity, as regards nociception (pain) rather than taste. These compounds are used to treat or prevent case of inflammation, is chaemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein comprising proton-sensitive neuronal channel -screening for analgesics and for treating neurodegenera
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4

                                                                                                                                                                                                                                                                                                          demonstrate characteristics of native sodium channels. This allows identification of agonists and antagonists which could be of possible use in treatment of diseases associated with the dysfunction of the central nervous system, e.g. psychiatric disease such as depression, schizophrenia, and dementias such as Alzheimer's Disease. Treatments for diseases with altered sodium channel activities or neuronal cell membrane depolarization or hyperpolarization e.g. autism, dyslexia, seizures could also be developed. Knowledge of non-voltage gated sodium channels that are involved in either determining resting membrane potential in the brain or in responding to neurotransmitters is very limited. The discovery of the nucleotide sequence for one of these proteins allows further identification of their use to be carried out.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        amiloride sensitive; sodium; lithium; treatment; disease; dysfunction; central nervous system; psychiatric disease; depression; schizophrenia; dementia; Alzheimer's Disease; neuronal cell membrane depolarization;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          corresponding cDNAs which are related members of this sub-family of protein channels. Injection of the preferred DNA expression system i Xenopus oocytes results in in vitro translation and production of a functional sodium channel which can then be used as an assay to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel human brain sodium channel protein, BNC1 that is non-voltage dependent, amiloride sensitive and non-discriminate between sodium and lithium current. Probes generated from sequence the BNC1 nucleic acid sequence can be used to isolate other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                The present sequence represents a human neuronal acid-sensitive cation channel 2A (ASIC2A) protein. The protein is a proton-gated cation channel subunit that has biphasic desensitisation kinetics with both a rapidly inactivating sodium-selective and a sustained component. The channels are sensitive to amiloride. The specification describes ASIC3 proteins, which are expressed in the sensory neurons but not in the brain. The cation transport channel proteins can be used in methods to identify substances capable of modulating the activity of cation transport channels. The human ASIC3 protein is also an acid sensor,
                                                                                                                                                                                                                                                                                                                                                                                                                Novel human of to identify activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Neuronal acid-sensitive cation channel; ASIC; ASIC 2A; proton-gated cation channel; biphasic desensitisation; cation transport channel; acid sensor; pH detection.

```
This sequence represents an acid sensitive ion channel (ASIC) of the invention, isolated from rat dorsal root ganglion. Antisense ASIC DNA or RNA is useful in gene therapy for downgrading expression of ASIC protein, for pH mediated pain disorders e.g. in ischaemia. The vectors are useful in for incorporating ASIC DNA or RNA for use in gene therapy. Proton-gated ion channel agonists and antagonists are identified using cells transformed with ASIC DNA by allowing interaction between the candidate substance and ASIC protein in the membrane, and measuring interaction and/or cell response. Partial agonists and antagonists can be identified by their ability to block the response of the cell to present in a solution of a given acid pH or any agonist. The hybridisation probes are useful for screening libraries for ASIC DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                       claim
                                                                                                                                                                                                                                                                                                                                                                                                                          Acid sensitive
                                                                                                                                                                                                                                                                                                                                                                                                      treatment
                                                                                                                                                                                                                                                                                                                                                     5

                                                                                                                                                                                                                                                                                                                                                                                                                                   CC This sequence represents the rat Acid Sensing Ionic Channel (ASIC) 18
CC protein, a member of the neuronal cationic channel family that are
CC sensitive to amiloride and activated by protons. The protein can be
CC used to screen for modulators of these channels, particularly to identify
CC compounds that modulate perception of acidity, as regards nociception
CC (pain) rather than taste. These compounds are used to treat or prevent
CC pain associated with acidity (e.g. in cases of inflammation, ischaemia
CC or some tumours) and as inhibitors of neurodegeneration caused by
CC overexpression of the channels. Antibodies to the protein are used to
CC detect the channels in tissues, and to act therapeutically as channel
CC modulators. The nucleic acid can be used to generate transgenic,
CC particularly knockout, animals for studying ASIC-related disorders,
CC also for gene therapy. The channel protein, or its (ant)agonists, can
CC be used to treat or prevent cerebral neurodegenerative conditions (e.g.
CC Alsheimer's, Parkinson's or Huntington's diseases, amyotrophic lateral

                                                                                                                                                                                                                                                                                                                               The present sequence represents a rat neuronal acid-sensitive cation channel 1B (ASIC1B) protein. The protein is a proton-gated cation channel subunit that has biphasic desensitisation kinetics with both a rapidly inactivating sodium-selective and a sustained component. The channels are sensitive to amiloride. The specification describes ASIC3 proteins, which are expressed in the sensory neurons but not in the brain. The cation transport channel proteins can be used in methods to identify substances capable of modulating the activity of cation transport channels. The human ASIC3 protein is also an acid sensor, and might play an important role in the detection of lasting pH changes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Neuronal acid-sensitive cation channel; ASIC; ASIC 1B; proton-gated cation channel; biphasic desensitisation; amiloride; cation transport channel; acid sensor; pH detection.
                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 73-76;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A rat acid-sensitive cationic channel 1B (rASIC1B).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          30-MAY-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the rat Acid Sensing Ionic Channel (ASIC) 1A CC protein, a member of the neuronal cationic channel family that are sensitive to amiloride and activated by protons. The coding sequence was isolated from a rat brain DNA library using a probe amplified by primers AAV60845-V60846. The protein can be used to screen for modulators of these channels, particularly to identify compounds that modulators of these cohannels, particularly to identify compounds that catality (e.g. in cases of inflammation, ischaemia or some tumours) and as inhibitors of neurodegeneration caused by overexpression of the channels. Antibodies to the protein are used to detect the channels in citsques, and to act therapeutically as channel modulators. The nucleic acid can be used to generate transgenic, particularly knockout, animals for studying ASIC-related disorders, also for gene therapy. The channel correction, or its (ant)agonists, can be used to treat or prevent cerebral neurodegenerative conditions (e.g. Alzheimer's, Parkinson's or atavis anyotrophic lateral sclerosis or cerebellar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents an acid sensitive ion channel (ASIC) of the invention, isolated from rat dorsal root ganglion. Antisense ASIC DNA or RNA is useful in gene therapy for downgrading expression of ASIC protein, for pH mediated pain disorders e.g. in ischaemia. The vectors are useful for incorporating ASIC DNA or RNA for use in gene therapy. Proton-gated ion channel agonists and antagonists are identified using cells transformed with ASIC DNA by allowing interaction between the candidate substance and ASIC protein in the membrane, and measuring interaction and/or cell response. Partial agonists and antagonists can be identified by their ability to block the response of the cell to present in a solution of a given acid pH or any agonist. The hybridisation probes are useful for screening libraries for ASIC DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Page 55-57;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Acid sensitive ion channel (ASIC) for treatment of pH mediated pain
